

Pinus nigra subsp. laricio

Výška	50 m
Šírka	10-15m
Koruna	broad conical when young, later round, dark, dense crown
Kôra a vetvy	twigs orange-brown, bark grey, deeply grooved with irregularly shaped plates
Listy	flexible needles, in twos, 8 - 15 cm, green, evergreen
Kvety	? in clusters by the young shoots, yellow, fragrant flowers
Plody	pendent cones, single or in pairs, 5 - 10 cm long, 2 - 4 cm wide
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	any
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5b (-26,0 do -23,4 °C)
Odolnosť voči vetru	very good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady, pobrežné zóny, priemyselné oblasti
Tvar	Vysokokmeň, Viackmeň, Vyvetvený ihličnan, Vzorový ihličnan
Pôvod	Corsica, Italy

This Pinus only differs in detail from P. nigra subsp. nigra, also forming a very large impressive tree with a striking bark. When young the tree is pyramidal although it has broader and round to almost umbel-shaped crown when mature. The bark is a lighter grey than P. nigra subsp. nigra and the bark plates are larger. It is deeply grooved and very decorative, especially on older trees. The twigs are orange-brown. The needles are lighter green and distinctly less stiff than on P. nigra subsp. nigra. The light brown, pendent cones hang in pairs or single. The tree is suitable for many types of soil and also grows on limy soil. Tolerates sea wind and is not sensitive to air pollution.
