

Sequoia sempervirens 'Winter Blue'

Výška	30 m, fast growing
Šírka	6-10m
Koruna	narrow pyramidal, half-open crown
Kôra a vetvy	twigs reddish brown, bark orange-brown, soft, fibrous, peeling in long strips
Listy	needles, spirally arranged, 1.5 - 2.5 cm, blue green, evergreen
Kvety	inconspicuous
Plody	oval cones, 1.5 - 3 cm long, 1.3 - 1.8 cm wide, reddish brown
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	sandy loam soil, well-drained
Pôdna vlhkosť	Vhodné do vlhkých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	8a (-12,2 do -9,5 °C)
Odolnosť voči vetru	good, also to sea wind
Ostatná odolnosť	Odolné vetru
Použitie	pobrežné zóny
Tvar	Vysokokmeň, Vyvetvený ihličnan, Vzorový ihličnan
Pôvod	Dirk Winter, Forestfarm Nursery, Williams, OR, USA, before 2001

Fast growing conifer with a narrow pyramidal crown, up to 30 m, even higher in the right conditions. The striking, orange-yellow bark is soft and fibrous and peels off in long strips. The horizontally attached twigs are in whorls. The needles are spirally arranged along the twigs and are pressed against the twig at their base. They are blue-green and have two stomatal stripes on the underside. In winter their colour becomes more intense and more blue than green. The narrow oval cones are brown and relatively inconspicuous. When mature, 'Winter Blue' is more densely branched than the species. The slender crown of this large tree means it can also be used in wide borders. Prefers to grow on a well-drained, sandy loam soil. Good wind tolerance. Can also tolerate sea wind but not drying wind. When young this tree needs protection against severe frost.
