

Taxus baccata f. aurea

Výška	5-8 m
Šírka	3-4m
Koruna	broad ovoid, dark, dense crown
Kôra a vetvy	flaking, reddish brown
Listy	yellow, evergreen
Kvety	yellow, flowers in April
Plody	red
Tŕne	žiadny
Jedovatosť	Má jedovaté časti
Typ pôdy	clay soil, loamy soil, sandy soil, acid soil, calcareous soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1-6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1-6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady, priemyselné oblasti, malé záhrady, dvory
Tvar	Vzorový ihličnan

A medium-size tree with an ascending to broad ascending crown. This natural form is propagated by seeding so the trees have a variety of crown shapes, foliage colour and sex. The twigs are brown and the old bark is brown-red with deep grooves and flaking. The needles range from intense yellow to green-yellow. The tree can be either male or female. The female trees can bear a lot of fruit. These consist of elliptical brown-black seeds that are largely enclosed by a fleshy red aril. Broad park tree for any well-drained soil. Tolerates heavy pruning and is perfect for hedges and other shapes.
