

Taxus ×media 'Hillii'

Výška	2-3 m
Šírka	2-4m
Koruna	ovoid / egg-shaped, dark, dense crown
Kôra a vetvy	reddisch brown
Listy	green, evergreen
Kvety	unremarkable
Plody	fruitless cultivar
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	clay soil, loamy soil, sandy soil, acid soil, calcareous soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5b (-26,0 do -23,4 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Použitie	stromy do nádob, strešné záhrady, priemyselné oblasti, dvory
Tvar	Vzorový ihličnan, Ihličnan na živý plot

Taxus ×media 'Hillii' is a strong large shrub to small tree with dense branching, giving it a compact, full-bodied appearance. At a young age, this cultivar grows broadly upright, but later clearly wider and rounder in shape. Because of its wider shape and dense branching, 'Hillii' is particularly suitable for wide (block) hedges and topiary. 'Hillii' resembles 'Hicksii' in name, but as a plant more like 'Greenland' and 'Overeynderi'. Not least because 'Hillii' is male and 'Hicksii' is female. The poisonous seeds are therefore not formed, although the foliage is also poisonous. However, 'Hillii' does flower profusely, visible by the small yellow buds and clouds of pollen when the plant moves. There are female plants in circulation under the name 'Hillii', but these are not true to type. It is an old cultivar, but still one of the most widely used. Tolerates, like other Taxus, heavy pruning well.
