

## Acer campestre 'Anny's Globe'

|                            |                                                                                                       |
|----------------------------|-------------------------------------------------------------------------------------------------------|
| Výška                      | 3-5 m                                                                                                 |
| Šírka                      | 2-3m                                                                                                  |
| Koruna                     | round/spherical, dark, dense crown                                                                    |
| Kôra a vetvy               | grey                                                                                                  |
| Listy                      | green                                                                                                 |
| Jesenné sfarbenie          | Žltá                                                                                                  |
| Kvety                      | yellowgreen, flowers in May                                                                           |
| Plody                      | redgreen, inconspicuous                                                                               |
| Tríne                      | Žiadny                                                                                                |
| Jedovatosť                 | Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá                                                   |
| Typ pôdy                   | clay soil, loamy soil, sandy soil, peaty soil                                                         |
| Pôdna vlhkosť              | Vhodné do suchých pôd                                                                                 |
| Spevnené plochy            | Toleruje čiastočné spevnenie                                                                          |
| Zóna odolnosti             | 5 (-28,8 do -23,4 °C)                                                                                 |
| Odolnosť voči vetru        | good/very good                                                                                        |
| Ostatná odolnosť           | Odolné mrazu (WH 1–6), Odolné vetru, Odolné posypovej soli                                            |
| Stromy pre zvieratá a hmyz | Odolné mrazu (WH 1–6), Odolné vetru, Odolné posypovej soli, Cenné pre motýle                          |
| Použitie                   | úzke ulice, stromy do nádob, strešné záhrady, pobrežné zóny, priemyselné oblasti, malé záhrady, dvory |
| Tvar                       | Vysokokmeň                                                                                            |

Acer campestre 'Anny's Globe' is a bulbous growing cultivar, usually grafted on a tall stem. The tree grows slowly and will develop a densely branched, compact, almost spherical crown. Eventually, 'Anny's Globe' reaches a height of 3 - 5 m. Depending on the graft height, the final height may vary slightly. Has the same characteristics as the species (see A. campestre), but 'Anny's Globe' is smaller in all parts and hardly suffers from mildew or spider mites. In autumn, the leaves turn golden yellow before falling off. Because of its small crown size, this cultivar is extremely suitable for use in tree boxes, roof gardens, (small) gardens, parks and small-scale green projects. The fact that this tree tolerates dry soil and semi-paved areas and can stand in full sun increases its application possibilities. 'Anny's Globe' was selected as a seedling of 'Eco Sentry' by André van Nijnatten from Zundert in 1993. Hardiness zone: 5
