

Acer cappadocicum

Výška	10 - 18 m
Šírka	7-11m
Koruna	wide egg-shaped, half-open crown
Kôra a vetvy	young twigs shiny green, striped
Listy	5/7 lobes, dark green, 8 - 14 cm
Jesenné sfarbenie	Žltá
Kvety	yellow-green corymbs, circa 6 - 7 cm, May
Plody	single-seeded, winged, light green
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	humic moist soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6 (-23,3 do -17,8 °C)
Odolnosť voči vetru	moderate to good
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Cenné pre motýle
Tvar	Vysokokmeň, Viackmeň
Pôvod	Middle-East (North Turkey to Iran and in the Caucasus)

Medium-sized tree with a wide, strongly branching dense crown. The young twigs are of a shiny green, often with light grey stripes, which turn grey-brown later on. Yet, this variety is not a member of the “Snake bark maples”, because the stripes are too indistinctive. The dark green leaves have strikingly thin leaf stalks with milk sap. They are slightly shiny and have five to seven, distinctively pointed, lobes. In autumn they turn into deep yellow. A. cappadocicum is a tree that thrives well in a moist, humic soil. Do not plant the tree in wind-swept sites.
