

## Acer palmatum 'Dissectum'

|                            |                                                                               |
|----------------------------|-------------------------------------------------------------------------------|
| <b>Výška</b>               | 3 - 4 m                                                                       |
| <b>Šírka</b>               | 3-4m                                                                          |
| <b>Koruna</b>              | flat-topped spherical, mushroom-shaped, dark, dense crown, capricious growing |
| <b>Kôra a vetvy</b>        | smooth, grey-brown                                                            |
| <b>Listy</b>               | palmatifid with 7 deeply dissected leaf segments, mid-green                   |
| <b>Jesenné sfarbenie</b>   | Oranžová                                                                      |
| <b>Kvety</b>               | red flower corymbs, May                                                       |
| <b>Plody</b>               | single seeds, winged, always in pairs, pink                                   |
| <b>Tríne</b>               | Žiadny                                                                        |
| <b>Jedovatosť</b>          | Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá                           |
| <b>Typ pôdy</b>            | any, except clay, and not too dry                                             |
| <b>Spevnené plochy</b>     | Netoleruje spevnené plochy                                                    |
| <b>Zóna odolnosti</b>      | 6 (-23,3 do -17,8 °C)                                                         |
| <b>Odolnosť voči vetru</b> | moderate to poor                                                              |
| <b>Ostatná odolnosť</b>    | Odolné mrazu (WH 1–6)                                                         |
| <b>Použitie</b>            | stromy do nádob, strešné záhrady, malé záhrady, dvory                         |
| <b>Tvar</b>                | Vysokokmeň, Viackmeň                                                          |
| <b>Pôvod</b>               | Japan, before 1784                                                            |
| <b>Synonymum</b>           | Acer p. var. dissectum viride                                                 |

Low, broad shrub, with widely overhanging branches if grafted onto a stem. The leaves are palmate and the leaf segments are also dissected nearly to the main veins. The young leaf is light green to yellowish green. The summer leaf is mid-green. In autumn it turns flaming orange to light red. ‘Dissectum’, previously also traded widely as the variety *dissectum viride*, gives its name to all of the “Dissectum Group”. A common characteristic of this cultivar group is that the leaf segments of the palmatifid leaves are very deeply dissected.
