

Acer palmatum 'Garnet'

Výška	3 - 4 m
Šírka	3-4m
Koruna	flat-topped spherical, dark, dense crown, capricious growing
Kôra a vetvy	smooth, grey-brown
Listy	palmatifid with 5 - 7 deeply dissected leaf segments, dark wine red
Jesenné sfarbenie	Červená
Kvety	red flower corymbs, May
Plody	single seeds, winged, always in pairs, pink
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	any, except clay, and not too dry
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6 (-23,3 do -17,8 °C)
Odolnosť voči vetru	moderate to poor
Ostatná odolnosť	Odolné mrazu (WH 1-6)
Použitie	stromy do nádob, strešné záhrady, malé záhrady, dvory
Tvar	Vysokokmeň, Viackumeň
Pôvod	Gebr. Guldemond, Boskoop, Netherlands, 1959
Synonymum	Acer p. 'Dissectum Garnet'

'Garnet' is probably the most used cultivar of the "Dissectum" group. The plant grows rather more vertically than other cultivars in this group. Eventually, 'Garnet' acquires a virtually round habit. If grafted onto a stem, the branches will hang gracefully. The deep, wine-red colour of the leaves is retained all summer, becoming even redder in autumn. The leaf is relatively large, sometimes more than 10 cm on young twigs, and the leaf segments are less deeply dissected than on other "Dissectum" cultivars. This endows 'Garnet' with a rather less delicate appearance, but it is a strong and vigorously growing cultivar.
