

Acer pseudoplatanus 'Erectum'

| | |
|---------------------|--|
| Výška | 20 - 25 m |
| Šírka | 6-10m |
| Koruna | egg-shaped, wider with age, dark, dense crown |
| Kôra a vetvy | bark grey, branches grey to olive-green |
| Listy | 5 lobes, green, up to 30 cm, in autumn matt golden yellow |
| Jesenné sfarbenie | Žltá |
| Kvety | yellow-green, in pendent racemes, April |
| Plody | winged nutlets (samara), 3 - 3.5 |
| Tríne | Žiadny |
| Jedovatosť | Má jedovaté časti |
| Typ pôdy | any soil |
| Pôdna vlhkosť | Odolné voči krátkodobému zaplaveniu |
| Spevnené plochy | Toleruje čiastočné spevnenie |
| Zóna odolnosti | 4 (-34,4 do -28,9 °C) |
| Odolnosť voči vetru | very good |
| Ostatná odolnosť | Odolné mrazu (WH 1–6), Odolné vetru |
| Použitie | bulváre a široké ulice, pobrežné zóny, priemyselné oblasti |
| Tvar | Vysokokmeň |
| Pôvod | The Hague, The Netherlands, 1955 |

Medium-sized to large tree, reaching a height of 25 m. A tree that is very easy to maintain and requires little pruning. Juvenile trees have a columnar shape, but are in maturity growing wider with more spreading branches. The juvenile shoots are light green. The shallowly lobed leaf is larger than of the species and has short, thick leaf stalks with an almost straight leaf base. Flowers are of the species, appearing while the leaf emerges. Abundance of fruit. 'Erectum' was selected in 1955 by the well-known dendrologist Doorenbos. The original tree was planted as a seedling on the Nachtegaalplein in The Hague (NL). It is a good street and avenue tree, well suited for application in cities. Deep rooting with good branching. 'Erectum' demands little from the soil; tolerates wet and cold soils. Wind and sea wind resistant.
