In contrast to most red maple cultivars, Redpointe was not only selected for its autumn colours. In comparison to other A. rubrum cultivars, the strength of Redpointe is its relatively slender crown form and the straight-growing main stem. The tree originated in a hybridisation programme intentionally designed to develop a tree with these qualities. It is a healthy, vigorously growing tree with a very regular crown. The summer leaf is a shiny dark green, turning a splendid bright red in autumn. Highly suitable as a street and park tree. Its growth will stagnate on calcareous soil. In such soil, as with very dry soil, the autumn change of colour will be less noticeable. Moderately tolerant of wind, with poor tolerance of sea wind.
