

Betula albosinensis

Výška	6 - 10 m
Šírka	4-6m
Koruna	wide pyramidal, loose, half-open crown
Kôra a vetvy	orange brown, flaking bark, red-brown twigs
Listy	ovate, acute-pointed, dark green, 6 - 8 cm
Jesenné sfarbenie	Žltá
Kvety	catkins, light yellow, ? appearing with leaf, ? 8 - 13 cm, April
Plody	fruit catkins, 3.5 - 4.5 cm
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	few requirements
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6a (-23,3 do -20,6 °C)
Odolnosť voči vetru	moderate to good
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Cenné pre motýle
Tvar	Vysokokmeň, Viackmeň
Pôvod	West China
Synonymum	Betula albosinensis var. septentrionalis

Birch with small leaves from the mountains in West China found at heights of up to 4 km. In spite of the slow growth specimen of over 10 m can be found there. The wide pyramidal crown has many thin, soft, weeping twigs with a red brown colour, width circa 6 m. The bark has an orange to orange brown colour and already flakes at an early age. The dark green leaf is bare on the topside, the underside is glandular haired. It is ovoid and acuminate. The leaf margin is double-toothed. Betula albosinensis opens early in spring and the leaf turns golden yellow in autumn. The green yellow flowers appear in pendulous catkins in April. B. albosinensis roots shallow with a fine branching root system and has many fibrous rootlets.
