

Celtis australis

Výška	10 - 15 (20) m
Šírka	10-12m
Koruna	round to umbel-shaped, half-open crown
Kôra a vetvy	grey, smooth, later peeling
Listy	ovate-lanceolate to ovoid, dark green, 9 - 15 cm
Jesenné sfarbenie	Žltá
Kvety	inconspicuous, green, April/May
Plody	round stone fruit, black red, Ø circa 1 cm
Trne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	well-drained soil, tolerates drought
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	slightly susceptible
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Cenné pre motýle
Použitie	bulváre a široké ulice, priemyselné oblasti
Tvar	Vysokokmeň, Viackmeň
Pôvod	South Europe, North Africa, West Africa

A seldom used tree with a round to umbel-shaped crown. Mature specimen may attain a height of over 20 m, the tree grows with gracefully hanging branches. The bark is grey and smooth, when maturing peeling in small plates. The ovate-lanceolate to ovoid leaf is sharply toothed and with a very long twisted point. The topside is dark green, the underside is grey green. The leaf is rough to the touch on both sides. After an inconspicuous inflorescence the berry-like stone fruits appear. They are dark red to almost black and taste sweet. They hang down from circa 2 cm long, pilose stalks. The wood is useful and the young, flexible twigs were once used for whips, hence its name “whip tree”. A graceful tree that is little susceptible to air pollution. Young twigs can be damaged by frosts.
