

Cercis canadensis

Výška	6 - 8 (12) m
Šírka	6-8m
Koruna	round to flat globular, half-open crown
Kôra a vetvy	grey, later shallowly grooved
Listy	wide heart-shaped, bright green, 8 - 14 cm
Kvety	light pink to pale red, in clusters, April/May, fragrant flowers
Plody	brown, flat pods, to 8 cm long
Trne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	calcareous sand or loam soils, not too wet
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Cenné pre motýle
Použitie	malé záhrady
Tvar	Vysokokmeň, Viackmeň
Pôvod	eastern and central North America

From a wide, spreading shrub *C. canadensis* grows into a nice, often multiple-stemmed solitary tree of average height. The bark is grey and shallowly grooved, when mature the bark can flake in small plates. The leaf is wide heart-shaped with a pointed or acuminate tip. The flowers appear before the leaf in compact clusters on the old twigs, branches and trunk. The flat pods persist all winter. It is a deep rooting tree with a coarse root system. Thrives best in a sheltered, sunny and fertile locations and is very hardy. The nice cultivar 'Forest Pansy' has a dark purple-red leaf.
