

Clerodendrum trichotomum

Výška	circa 6 m
Šírka	4-6m
Koruna	round, half-open crown
Kôra a vetvy	light grey
Listy	ovoid to heart-shaped, green, 8 - 15 cm
Kvety	white, with dark red calyx, bunches, August/September, fragrant flowers
Plody	blue, borne red calyx
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	few requirements, tolerates sandy soil
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	7a (-17,7 do -15,0 °C)
Odolnosť voči vetru	moderate
Stromy pre zvieratá a hmyz	Cenné pre motýle
Použitie	stromy do nádob, malé záhrady, dvory
Tvar	Vysokokmeň, Viackmeň
Pôvod	East China, Japan

A multiple-stemmed shrub by nature, sometimes cultivated as a tree. The leaf has a pointed tip and smells strongly of peanut butter when rubbed. The flower bunches are loose and open and consist of small, circa 1.5 cm large, white flowers that have a pleasant fragrance and a strikingly dark red calyx. They can become circa 20 cm across. Just as nice are the circa 1 cm, beautifully deep blue berries, borne on a persisting dark red calyx. The plant has fleshy roots and can be propagated by root cutting. Its location has to be sunny and warm. In cold winters the young twigs may be damaged. The variety fargesii is different because the calyx are green instead of red. The fruits are usually slightly lighter blue.
