

Cornus alternifolia

Výška	6-8 m
Šírka	6-8m
Koruna	round/spherical, half-open crown
Kôra a vetvy	brown, green
Listy	green
Kvety	cream-white, flowers in May
Plody	blue, black
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	loamy soil, sandy soil, peaty soil, acid soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5b (-26,0 do -23,4 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, malé záhrady
Tvar	Viackeň

Small tree up to about 8 m, initially with a broad pyramidal crown that later becomes round. The lateral branches are grouped in nearly horizontal layers on the trunk. Like *C. controversa* and unlike other *Cornus* varieties, the leaf arrangement is alternate. The underside of the dark green leaf is bluish. In late spring, creamy white flowers in erect, flat corymbs appear along the entire length of the branches. They are followed by small, blue-black berries on conspicuous red stalks. Closely related to *C. controversa* and best regarded as a smaller version of this.
