

## Cornus asperifolia var. drummondii

|                            |                                                                    |
|----------------------------|--------------------------------------------------------------------|
| Výška                      | 4-7 m                                                              |
| Šírka                      | 4-6m                                                               |
| Koruna                     | round/spherical, dark, dense crown                                 |
| Kôra a vetvy               | brown                                                              |
| Listy                      | green                                                              |
| Kvety                      | yellowwhite, flowers in May                                        |
| Plody                      | white, blue                                                        |
| Tŕne                       | Žiadny                                                             |
| Jedovatosť                 | Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá                |
| Typ pôdy                   | clay soil, loamy soil, sandy soil, acid soil, calcareous soil      |
| Pôdna vlhkosť              | Vhodné do suchých pôd, Odolné voči krátkodobému zaplaveniu         |
| Spevnené plochy            | Toleruje čiastočné spevnenie                                       |
| Zóna odolnosti             | 5 (-28,8 do -23,4 °C)                                              |
| Odolnosť voči vetru        | good                                                               |
| Ostatná odolnosť           | Odolné mrazu (WH 1–6), Odolné vetru                                |
| Stromy pre zvieratá a hmyz | Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo |
| Tvar                       | Vysokokmeň                                                         |
| Synonymum                  | Cornus drummondii                                                  |

Usually a large, round shrub but eventually growing into a small tree. The twigs are initially purple, turning green-grey after 3 years. The drummondii variety is typified by its leaves, which are hairier and have a more elongated tip. The flowers are grouped in erect, umbel-shaped corymbs of about 8 cm. The individual flowers are small and yellowish white. They open in early summer. The berry-like fruits are pale blue to white. Grows wild in scrub, clay banks and thinly wooded areas, also in dry riverbeds. Tolerates a lot of water for a while.
