

Cornus controversa

Výška	6 – 8 (15) m
Šírka	6-8m
Koruna	round, branching in layers, half-open crown, capricious growing
Kôra a vetvy	green brown with shallow veins
Listy	wide ovate to wide oval, green, 8 – 15 cm
Jesenné sfarbenie	Červená, Fialová
Kvety	creamy-white, in umbel clusters, May/June
Plody	small dark-blue berry
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	all, if well-drained, no dry sandy soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, malé záhrady, dvory
Tvar	Vysokokmeň, Viackmeň
Pôvod	Japan, Korea, China

Small tree, its hallmark being the horizontal branches, growing in layers. In its natural surroundings it can attain a height of 15 m. The crown can be as wide as it is high. The twigs change from red brown to grey. The alternate leaf is irregular in shape and size and has a shiny dark green colour. The underside is strikingly blue green. In autumn it turns into purple red. The umbel clusters can become 15 cm across. They are short-stalked and are arranged along the horizontal branches. The many, dark-blue berries appear in autumn. In the Netherlands the fruit crop is infrequent and certainly not guaranteed. Shallow rooting with a fibrous root system. Due to an early flow of sap, pruning should take place in summer or in autumn.
