

Corylus avellana

Výška	5 - 7 m
Šírka	5-7m
Koruna	round, dark, dense crown
Kôra a vetvy	grey-brown, somewhat flaking later
Listy	round to obovate, dark green, 5 - 14 cm
Kvety	? catkins, brownish yellow, 5 - 7 cm, ? inconspicuous, February/March
Plody	edible nut, about 2 cm, partly enclosed by husk, edible fruits
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	any as long as airy and well-drained
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	very good
Ostatná odolnosť	Odolné mrazu (WH 1-6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1-6), Odolné vetru, Cenné pre včely (medonosné)
Použitie	stromy do nádob, strešné záhrady, priemyselné oblasti, malé záhrady
Tvar	Vysokokmeň, Viackmeň
Pôvod	Europe to southern Scandinavia, Middle East, North Africa

Strong shrub that grows to multi-stemmed tree with densely branching, round crown. The brown young twigs are slightly hairy, the older bark starts to peel after some years. The matt green leaves are also hairy, making them feel a little rough. In autumn they turn into brownish yellow. The graceful, male catkins are already visible before winter, but open around late February. The small, red, female flowers grow from the leaf buds and are inconspicuous. The fruits ripen around September. The hazelnuts are partly enclosed by two carpels. The nuts contain many vegetable fats and proteins and are therefore a healthy delicacy. The root system is susceptible to suffocation. Can be used in any soil as long as it is adequately airy and drained.
