

Euonymus alatus

Výška	4 m
Šírka	3-4m
Koruna	round, dark, dense crown, capricious growing
Kôra a vetvy	young twigs winged, bark grey-brown, somewhat grooved
Listy	obovate to ovate, bright green, 5 - 10 cm
Jesenné sfarbenie	Červená
Kvety	yellow-green, 0.6 - 0.8 cm, May
Plody	pinkish red, four-lobed capsules, seeds surrounded by orange membrane (arillus)
Tríne	Žiadny
Jedovatosť	Má jedovaté časti
Typ pôdy	any, if well-drained
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1-6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1-6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady, priemyselné oblasti, malé záhrady, dvory
Tvar	Vysokokmeň, Viackmeň
Pôvod	China, Japan, Korea, Siberia and Manchuria

A shrub that eventually grows into a small tree. Young twigs very conspicuously winged. These corky wings can be up to about 1 cm wide. These disappear as the branches age, and the bark becomes rather grooved. The red bud scales are conspicuous as the leaf emerges. Leaves bright green, turning splendid fiery red in autumn. The intense autumn colours have given the tree its common name “Burning bush” in the USA. The small, yellow-green flowers are followed by characteristic fruits that consist of a bursting pinkish-red capsule containing one seed (sometimes two) surrounded by an orange membrane (arillus). The fibrous root system is finely spread and fairly shallow. Thrives on any soil, tolerating both sun and shade, but is sensitive to drought and stagnant water around the roots.
