

Euptelea pleiosperma

Výška	5 - 10 m
Šírka	5-10m
Koruna	obovoid to broad vase-shaped, half-open crown
Kôra a vetvy	young twigs chestnut brown, bark dark grey-brown
Listy	broad oval, tip long and tapering, margin double serrated, dark green, 5 - 10 cm
Jesenné sfarbenie	Červená, Fialová
Kvety	in clusters, without petals or sepals, stamens red, march/april
Plody	winged all round, spatulate, light red, about 1.3 cm
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	fertile, moist but well-drained soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	7 (-17,7 do -12,3 °C)
Odolnosť voči vetru	moderate
Použitie	malé záhrady
Tvar	Vysokokmeň
Pôvod	Western China

Small to medium size, usually multi-stemmed tree with a vase-shaped crown. The chestnut brown young twigs bear attractively shaped, broad ovate leaves with double serrated margins and a long, tapering tip. Young leaves greenish brown to bronze, mature leaf dark green. The autumn colour can be dark purplish red. Blossoming comes before the leaf development. The flowers have no petals or sepals, consisting only of clusters of red stamens and light green pistils. The light red fruits are winged all round. Each fruit, containing one to three seeds, is about 1.3 cm in size and hangs on a stalk 2 - 5 cm long. Grows on any soil except limy, if sufficiently fertile. The soil must be sufficiently moist but well-drained. By preference, plant in a fairly sheltered position.
