

# Heptacodium miconioides

Výška	4 - 7 m
Šírka	3-6m
Koruna	vase-shaped to nearly round, half-open crown, capricious growing
Kôra a vetvy	Twigs light grey-green, bark yellowish brown to brown, scaling
Listy	opposed, elongated ovate, with 3 main veins, dark green, 8 - 16 cm
Kvety	white, in separate panicles, September
Plody	elongated capsule, with persisting purple-red calyx
Trne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	moist but well-drained soil
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	5 (-28,8 do -23,4 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Cenné pre motýle
Použitie	stromy do nádob, strešné záhrady, malé záhrady, dvory
Tvar	Vysokokmeň, Viackmeň
Pôvod	Central and eastern China
Synonymum	Heptacodium jasminoides

Grows from a shrub into a small tree with a vase-shaped to round crown, up to about 7 m high. The young twigs are light grey-green. The mature bark turns yellowish brown and peels in fairly long strips. The leaves are dark green and three main veins are visible in the lamina. A purple autumn colour can sometimes be seen. The flowers are white, opening in large panicles in September. Each terminal flower on the main and side shoots of the panicle is surrounded by a wreath of 3 - 6 flowers. The English name 'Seven son flower tree' is derived from this. Through the blossoming period, the white flower crown falls and the calyx extends, turning purple-red over several weeks. This prolongs the tree's decorative value. Tolerates nearly any soil as long as moist but well-drained and adequately fertile.
