

## Hippophae rhamnoides

Áno

<b>Výška</b>	2-4 m
<b>Šírka</b>	4-6m
<b>Koruna</b>	broad vase-shaped, dark, dense crown, capricious growing
<b>Kôra a vetvy</b>	grey
<b>Listy</b>	green, greygreen
<b>Jesenné sfarbenie</b>	Žltá
<b>Kvety</b>	yellow
<b>Plody</b>	yellow, orange
<b>Tríne</b>	Áno
<b>Jedovatosť</b>	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
<b>Typ pôdy</b>	clay soil, loamy soil, sandy soil, nutrient-poor soil
<b>Pôdna vlhkosť</b>	Vhodné do suchých pôd, Odolné voči krátkodobému zaplaveniu
<b>Spevnené plochy</b>	Netoleruje spevnené plochy
<b>Zóna odolnosti</b>	4 (-34,4 do -28,9 °C)
<b>Ostatná odolnosť</b>	Odolné mrazu (WH 1-6), Odolné vetru, Odolné posypovej soli
<b>Stromy pre zvieratá a hmyz</b>	Odolné mrazu (WH 1-6), Odolné vetru, Odolné posypovej soli, Plody ako potrava pre vtáctvo
<b>Použitie</b>	stromy do nádob, pobrežné zóny, malé záhrady, dvory

Buckthorn is a characteristic large shrub, eventually growing into a small tree to about 6 m. The vase-shaped to broad oval is usually somewhat irregular in shape, giving the tree a somewhat whimsical character. The narrow, grey-green leaves give the tree an airy character, which is enhanced by the grey underside of the leaves. Both sides of the leaves are finely silvery scaly. The flowers are monoecious and the tree dioecious. Thus, to produce fruit, a female plant is needed (e.g. 'Hergo' or 'Leikora'), which is pollinated by a male ('Pollmix'). Flowering in March-April is not very conspicuous. The fruits, which ripen in autumn, are. The fleshy fruits are up to about 1 cm in size and orange coloured. The edible fruits are very rich in vitamin C and were used as citrus substitutes in the former Eastern Bloc during the Cold War. Meanwhile, the fruits are once again rising in popularity in parts of Scandinavia, Poland and the Baltic states. H. rhamnoides is particularly (sea) wind resistant and can be used right down to the sea. The tree grows on any soil -even sparse- and tolerates both drought and temporary flooding. However, buckthorn grows best in deeply rooted, neutral to calcareous, sufficiently moist soil. The tree can therefore be used to combat erosion. For example, along roads and in central reservations. But of course H. rhamnoides is also suitable as a garden and park tree.
