

Ilex aquifolium 'J.C. van Tol'

Výška	6 m
Šírka	3-4m
Koruna	broad oval, dark, dense crown
Kôra a vetvy	young twigs purple, bark light green-brown, smooth
Listy	oval, dark green, margin barely spiked, 5 - 7 cm, evergreen
Kvety	?, white, inconspicuous, solitar? in the leaf axils, May/June
Plody	fleshy drupe, 8 - 10 mm, shiny red
Tríne	Žiadny
Jedovatosť	Má jedovaté časti
Typ pôdy	humic, moist but well-drained soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	very good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady, pobrežné zóny, malé záhrady, dvory
Tvar	Vysokokmeň
Pôvod	Van Tol, Boskoop, Netherlands, 1904

Grows from a shrub into a small or medium-size tree with a broad oval crown. The crown branches very densely. This effect is reinforced by the tough, evergreen leaf. The leaves are dark olive green and slightly bulbous. They are smooth-edged or have a few small prickles on the top half of the lamina. The flowers are single in the leaf axils. They are female, small and inconspicuous. They are followed by numerous glossy red, fleshy drupes (commonly called berries) with a diameter of 8 - 10 mm. Prefers a humic, moist but well-drained soil and tolerates either acidic or calcareous soil. As well as its use as a solitary tree in parks and in gardens, 'J.C. van Tol' is an excellent hedge plant.
