

Juglans ailantifolia

Výška	15 - 20 m
Šírka	15-20
Koruna	round, half-open crown
Kôra a vetvy	young twigs brown-green, bark light grey with reticulate grooves
Listy	imparipinnate, 40 - 50 (60) cm, with 11 - 17 leaf segments, elongated to elliptical, 10 - 16 cm, dark green, feathered leaf
Kvety	? red flowers in racemes and 10 - 20 cm, ? green catkins, 10 - 25 cm, May
Plody	round to somewhat ovoid, about 3 cm, in clusters of up to 20
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	any, if fertile
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5b (-26,0 do -23,4 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Tvar	Vysokokmeň, Viackmeň
Pôvod	Japan, Sakhalin
Synonymum	Juglans sieboldiana

Large park tree with broad, round crown, up to 20 m tall and broad. The first-year twigs are densely covered with glandular hairs, but have hardly any hairs in their second year. The large, imparipinnate leaves are 40 - 60 cm long and up to 90 cm long in young, vigorously growing trees. They consist of 11 to 17 dark green leaf segments and the leaf margins have shallow serrations. The male flower catkins can be 25 cm long. The flowers appear in May, soon after the leaves emerge. The fruits hang in clusters of up to 20. The husks carry sticky hairs. The nut has a short, pointed tip and a fairly thick membrane where the two halves meet. Grows on almost any soil, as long as fertile. Does need space to develop a good, regular crown.
