

Ligustrum vulgare 'Atrovirens'

Výška	4-6 m
Šírka	2-4m
Koruna	dark, dense crown
Kôra a vetvy	brown, grey
Listy	green
Kvety	white, flowers in July
Plody	black
Tríne	Žiadny
Jedovatosť	Má jedovaté časti
Typ pôdy	clay soil, loamy soil, sandy soil, peaty soil
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Ostatná odolnosť	Odolné mrazu (WH 1-6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1-6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady, pobrežné zóny, malé záhrady, dvory

As 'Atrovirens' always branches from the base, this shrub will not develop a tree-like habit. It is a very vigorously growing shrub up to about 3.5 m high. The leaves are oval to ovate-elongated and a healthy dark green colour. The leaves sometimes do not fall from the plant until February, making it effectively semi-evergreen. The flower panicles are relatively small at 2-4 cm long. In addition, the plant is not very floriferous. The flowers are white and open around mid-June-mid-July. They may be followed by glossy black berries, but these too are not produced in abundance. Because of its fine growth, 'Atrovirens' is extremely suitable as a hedge plant. But the shrub can also be used well in mixed plantings, although other, richer flowering species or cultivars may then be preferable. 'Atrovirens' was introduced by the German Spätsche Baumschulen in 1888. Hardiness zone 5a.
