

Liquidambar styraciflua 'Pendula'

Výška	15 - 20 m
Šírka	12-15m
Koruna	straight trunk and pendent lateral branches, dark, dense crown
Kôra a vetvy	Dark grey, deeply grooved, corky fissures on branches and twigs
Listy	palmately lobed, 5 lobes, glossy green, 8 - 16 cm long
Jesenné sfarbenie	Žltá, Oranžová
Kvety	yellow-green, inconspicuous, April/May
Plody	round, spiky capsule on long stem, 3 - 3.5 cm long
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	fertile, loamy soil
Pôdna vlhkosť	Vhodné do vlhkých pôd
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	bad
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Použitie	stromy do nádob, strešné záhrady
Tvar	Vysokokmeň, Vetvený
Pôvod	Sarah W. Crawford, Arkansas, USA, 1935

Large tree with vertical trunk and graceful, pendent lateral branches. The grey bark is deeply grooved. The young twigs are light green and develop large, corky fissures even when young. The leaf has 5 lobes and is glossy green. It turns dark yellow to orange in autumn. The flowers are inconspicuous and are followed by round, spiky capsules that persist in the winter. A curious form, described by Alfred Rehder of the Arnold Arboretum, USA, based on a tree found in Arkansas. First marketed around 1938. Unfortunately, this cultivar is very sensitive to wind. Prefers fertile, moist soil; cannot tolerate persisting drought.
