

Magnolia ×loebneri 'Leonard Messel'

Výška	5 m
Šírka	3-5m
Koruna	broad ovoid, dark, dense crown, capricious growing
Kôra a vetvy	grey, green
Listy	green
Kvety	whitepink, flowers in April
Plody	brown
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	clay soil, loamy soil, sandy soil, peaty soil, acid soil
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	6 (-23,3 do -17,8 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1-6)
Použitie	bulváre a široké ulice, malé záhrady, dvory
Tvar	Vysokomeň, Viackmeň

Grows from a large, densely branching shrub into a broad, ovoid, small tree with a height of about 5 m. The star-shaped flowers open around mid-April to mid-May. They are about 12.5 cm in size and consist of about 12 narrow petals that are a warm, light purplish red on the outside. The inside is light pink to whitish pink. Discovered by James Comber, head gardener of Nymans Gardens in Haywards Heath, Sussex, UK. Its small size makes it suitable for residential areas, squares and gardens.
