

Magnolia ×soulangeana

Výška	4 - 6 (9) m
Šírka	4-6m
Koruna	spreading vase-shape, later spreading ovoid, half-open crown, capricious growing
Kôra a vetvy	grey bark, twigs purple brown and bare
Listy	obovate to oblong, fresh green, 10 - 15 cm
Kvety	tulip-shaped, white and/or pink, April/May
Plody	red, uncommon, seed coral-red
Trne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	all, intolerant to alkaline soils
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	6 (-23,3 do -17,8 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Použitie	stromy do nádob, strešné záhrady, malé záhrady
Tvar	Vysokokmeň, Viackmeň
Pôvod	Étienne Soulange-Bodin, Paris, France, 1820

A hybrid between *M. denudata* and *M. liliiflora*. It is a slow-growing, large shrub that can sometimes grow into a multiple-stemmed tree. At first it has a spreading vase shape, but when maturing it spreads more, generating an ovoid crown. In the case of low branches, old branches can bend onto the ground. The spread may be as large as the height. It is one of the richest flowering Magnolias. There are more than 40 named cultivars which may differ considerably from each other with regard to the colour and the shape of the flowers. Colours vary from completely white to white with pink to dark pink hues. The flowers appear before the leaves. A late night frost may damage the flowers. As it usually concerns sterile varieties, production of fruit is practically absent. The fleshy roots grow both shallow and deep. Poor tolerance to dry soils.
