

Magnolia denudata

Výška	6 - 9 m
Šírka	6-9m
Koruna	ovoid to broad ovoid, dark, dense crown, capricious growing
Kôra a vetvy	twigs dark brown, bark grey-brown, rough
Listy	obovate to broadly elliptical, dark green, 7 - 15 cm
Kvety	white to light pink, about 10 cm, late March/April, fragrant flowers
Plody	compound capsule, dark green to reddish, seeds have red husk
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	airy, well-drained
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	6 (-23,3 do -17,8 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Použitie	bulváre a široké ulice, malé záhrady
Tvar	Vysokokmeň, Vetvený, Viackmeň
Pôvod	Eastern and southern China
Synonymum	Magnolia yulan

Medium-size tree with a broad ovoid crown, up to about 9 m. This height is attained only after many years. The tree can grow to over 15 m in the wild. The young twigs initially bear hairs but lose these after the first season. The mature bark is grey-brown and feels rough. The large, vase-shaped flowers are somewhat variable in shape and colour. The petals vary in width. The flowers are usually pure white, but wholly or partially light pink forms also occur. They have a delightful, citrus-like fragrance. The tree blossoms fairly profusely even when young, making it an attractive park tree.
