Magnolia denudata

Synonymum	Magnolia yulan
Pôvod	Eastern and southern China
Tvar	Vysokokmeň, Vetvený, Viackmeň
Použitie	bulváre a široké ulice, malé záhrady
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Odolnosť voči vetru	moderate
Zóna odolnosti	6 (-23,3 do -17,8 °C)
Spevnené plochy	Toleruje čiastočné spevnenie
Typ pôdy	airy, well-drained
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Tŕne	Žiadny
Plody	compound capsule, dark green to reddish, seeds have red husk
Kvety	white to light pink, about 10 cm, late March/April, fragrant flowers
Listy	obovate to broadly elliptical, dark green, 7 - 15 cm
Kôra a vetvy	twigs dark brown, bark grey-brown, rough
Koruna	ovoid to broad ovoid, dark, dense crown, capricious growing
Šírka	6-9m
Výška	6 - 9 m

Medium-size tree with a broad ovoid crown, up to about 9 m. This height is attained only after many years. The tree can grow to over 15 m in the wild. The young twigs initially bear hairs but lose these after the first season. The mature bark is grey-brown and feels rough. The large, vase-shaped flowers are somewhat variable in shape and colour. The petals vary in width. The flowers are usually pure white, but wholly or partially light pink forms also occur. They have a delightful, citrus-like fragrance. The tree blossoms fairly profusely even when young, making it an attractive park tree.
