

Malus sylvestris

Áno

Výška	7 - 9 m
Šírka	6-8m
Koruna	round, irregular, half-open crown, capricious growing
Kôra a vetvy	hairless, grey, twigs brown to brownish-grey
Listy	oval to ovoid, glossy green, 4 - 8 cm
Kvety	pale pink to white, single, Ø 3 - 4 cm
Plody	ovoid to round, greenish-yellow, Ø 3 - 4 cm, edible fruits
Tríne	Áno
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	nutritious, well drained soil
Pôdna vlhkosť	Odolné voči krátkodobému zaplaveniu
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Odolnosť voči vetru	good, susceptible to sea wind
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	priemyselné oblasti
Tvar	Vysokokmeň, Viackmeň
Pôvod	Europe
Synonymum	Malus communis

The wild apple is a small tree occurring naturally in Europe. It is a somewhat irregularly growing tree with a fairly loose, rounded crown. The bark is grey and flakes off in small plates. Sometimes the young red-brown twigs carry thorns. The ovoid to oval leaves are glossy green. The leaf edge is serrated. The flowers appear in May at the same time as the leaves. They are pale pink to white and measure approx. 3 - 4 cm. The round to ovoid fruits appear after the flowers. They are greenish-yellow sometimes with a red blush on the sunny side. Wild or escaped apples are often sweet. The tree prefers nutritious soil. *M. sylvestris* is one of the ancestors of the enormous range of fruits currently cultivated.
