

Morus alba 'Fruitless'

Výška	8 - 10 (15) m
Šírka	8-10m
Koruna	wide ovoid to round, half-open crown
Kôra a vetvy	grey-green to grey-brown, bark regularly grooved
Listy	ovate, sometimes a little dissected, glossy green, 10 - 19 cm
Kvety	inconspicuous in pendent catkins, 5 - 6 cm, green, exclusively male, May/June
Plody	none, fruitless cultivar
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	light and well drained, preferably calcareous
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Tvar	Vysokokmeň, Viackmeň

Grows from a large shrub into a medium-size tree from 8 to 10 m tall. By nature, often multi-stem, but also grown as an arbour tree (canopy). The crown is open and has quite tangled branching. The young twigs are grey-green, the mature bark is grey-brown and regularly grooved. The leaf is regular ovate and sometimes slightly dissected just at the end of the shoots. The tip of the glossy, green leaf is pointed and the margin serrated. Morus alba is naturally monoecious and 'Fruitless' is a male cultivar. So, after the inconspicuous but lavish blossom no fruits are formed. This makes the tree suitable for public spaces where mess caused by fruits is undesirable. Saplings are sensitive to frost. Thrives in a sunny, warm and sheltered site. Favours calcareous soils and grows in infertile soil.
