

Morus alba 'Nana'

Výška	2 -3.5 m
Šírka	2-3m
Koruna	round, dark, dense crown
Kôra a vetvy	twigs green, bark grey-brown, grooved
Listy	wide ovate to heart-shaped, little lobed, glossy dark green, 5 - 7 cm
Jesenné sfarbenie	Žltá
Kvety	unknown
Plody	unknown, edible fruits
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	light and well drained, preferably calcareous
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	fairly
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Použitie	stromy do nádob, malé záhrady, dvory
Tvar	Vysokokmeň, Viackmeň
Pôvod	Hungary

Small, spherical shrub with somewhat tangled, dense branching. Grafted as sphere onto standard and then has height of approx. 3.5 m. The young twigs are green, the mature bark is grey-brown and regularly grooved. The leaf is broad ovate to heart-shaped and little lobed, only on the leaf base, sometimes deeper. It is approx. 7 cm long, significantly smaller than the species. The margin of the glossy dark green leaf is sharply serrated. In autumn the leaf turns yellow. Morus alba is naturally monoecious. There are various clones of 'Nana' in culture. One of them is male; sex of other clones is unknown. After the inconspicuous blossom there is not usually any fruit. Preferably plant in a sunny, warm and sheltered site. Favours calcareous soils and grows in infertile soil.
