

Morus alba 'Pendula'

Výška	4 - 6 m
Šírka	5-7m
Koruna	broad weeping , half-open crown
Kôra a vetvy	light grey, bark has regular grooves
Listy	ovoid to heart-shaped, bright green, 8 - 14 cm
Kvety	unremarkable pendulous catkins, green, May/June
Plody	mostly white, sometimes reddish, 1 - 2.5 cm long, edible fruits
Trne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	light, well-drained soil, preferably calcareous
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Plody ako potrava pre vtáctvo
Tvar	Vysokokmeň, Vetvený
Pôvod	Italy, 1890

A cultivar of the white mulberry grafted on a stem. It forms a small tree with branches that grow vertically downwards at first. In older specimens the branches grow out somewhat in the width. It can eventually attain a maximum width of 4 m. The final height attained depends on the height of the graft. M. alba is used as the graft trunk. The irregularly shaped leaves are often deeply incised and can grow to a length of approx. 14 cm. The leaves are a glossy light green and rough to the touch. The monoecious tree has unremarkable male and female flowers. The small fruits resemble raspberries and are edible. They have a bland to slightly sweet taste. This is a tree for a sunny, warm, sheltered site. Saplings are sensitive to frost. Likes chalky soils and grows in poor soil.
