Synonymum	Nyssa sylvatica 'Red Wine'

Medium-size tree with a broad pyramidal to broad ovoid crown from 10 to 15 m tall. When mature the branches arch strongly so that the crown becomes broader and almost round. The glossy dark green leaves are oval to obovate and a fraction larger than the species. The young leaves are red contrasting nicely with the dark green background of mature leaves. In autumn, they turn deep red again over several weeks. The autumn colours may vary depending on the soil type in which the tree stands. The root growth is deep making transplantation difficult. *N. sylvatica* grows naturally in marshy sites but this tree can also thrive well in less moist places.
