

Parrotia persica

Výška	7 - 10 (12) m
Šírka	10-12m
Koruna	flat-topped sphere, half-open crown, capricious growing
Kôra a vetvy	light grey with purplish brown spots, branches olive brown
Listy	reverse ovoid to oval, green, purplish red edge, 7 -10 cm
Jesenné sfarbenie	Žltá, Oranžová, Červená, Fialová
Kvety	small flower heads, red, February/March
Plody	spiked capsule, approx. 1 cm
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	well-permeable
Pôdna vlhkosť	Vhodné do suchých pôd, Odolné voči krátkodobému zaplaveniu
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Použitie	stromy do nádob, strešné záhrady
Tvar	Vysokokmeň, Vetvený, Viackmeň
Pôvod	Northern Iran and Southern Russia

Usually a shrub with branches starting at ground level, growing to become a medium-large tree with a spreading, irregular branching pattern. Sometimes also cultivated as a high stemmed tree. The trunk is light grey with purplish brown spots and has flaking bark plates. This is especially decorative in more mature trees. Young twigs have remarkable lenticels. The glossy leaf is dark when it emerges and usually has a slanted shape, with the top half of the leaf edge undulating irregularly. The main decorative value is the autumn colours of red, yellow and purple. Mainly older specimens bloom. The flowers are about 2 cm big and are striking due to the bright red anthers. The bare shrub is spectacular when in full bloom. After flowering, 1-cm spiked brown fruit appears. The tree has a fine root system close to the surface.
