

Platanus orientalis 'Minaret'

Výška	8 - 12 m
Šírka	6-7m
Koruna	column-shaped, dark, dense crown
Kôra a vetvy	bark flakes off, young twigs reddish-purple
Listy	palmatifid to palmate, dark green, 8 - 10 cm
Kvety	rounded, yellow-green, May/June
Plody	fruit heads, 3 - 6 together, on a long stem
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	all, preferably somewhat humid and calcareous
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1-6), Odolné vetru, Odolné posypovej soli
Použitie	bulváre a široké ulice, úzke ulice
Tvar	Vysokokmeň, Viackmeň
Pôvod	Leenderheim Nursery, Leende, The Netherlands, 1997

This oriental plane tree cultivar was found as a seedling of *P. orientalis* 'Digitata'. It forms a compact column-shaped crown with very dense branches and grows more slowly than the species. The bark is yellow, and the green (sometimes grey) bark flakes off in small plates. This produces the characteristic plane bark. Young shoots and leaf stalks are a remarkable purple-red in colour. The leaves are deeply incised and usually have 5 - 7 lobes with serrated points. The autumn colour is yellow. The spherical flowers are covered with protruding hairs. The fruit, that turns colour from green to brown and measures approx. 2.5 cm in diameter, appears after flowering. The fruit hangs in groups of 3 to 6 and remains on the tree until deep into the winter. Saplings are sensitive to frost.
