

## Ptelea trifoliata

<b>Výška</b>	5 - 6 (9) m
<b>Šírka</b>	5-6m
<b>Koruna</b>	round, dark, dense crown, capricious growing
<b>Kôra a vetvy</b>	bark grey-brown, somewhat grooved, young twigs green
<b>Listy</b>	triple, glossy green, 6 - 15 cm
<b>Jesenné sfarbenie</b>	Žltá
<b>Kvety</b>	in broad plumes, greenish-white, June, fragrant flowers
<b>Plody</b>	broad plumes with flattened winged nutlets (samaras)
<b>Tríne</b>	Žiadny
<b>Jedovatosť</b>	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
<b>Typ pôdy</b>	nutritious, well drained
<b>Spevnené plochy</b>	Toleruje čiastočné spevnenie
<b>Zóna odolnosti</b>	5a (-28,8 do -26,1 °C)
<b>Odolnosť voči vetru</b>	good
<b>Ostatná odolnosť</b>	Odolné mrazu (WH 1–6), Odolné vetru
<b>Stromy pre zvieratá a hmyz</b>	Odolné mrazu (WH 1–6), Odolné vetru, Cenné pre motýle
<b>Použitie</b>	stromy do nádob, malé záhrady, dvory
<b>Tvar</b>	Vysokokmeň, Viackmeň
<b>Pôvod</b>	the east of North America and Mexico

Grows naturally on dry rocky slopes in the mountains of eastern North America and Mexico. The loose crown is rounded and open and all parts of the tree are aromatic. The smooth bark is grey-brown, later somewhat grooved and slightly flaky. One-year-old twigs are green, older twigs yellowish-brown. The leaves are triple and fragrant. The autumn colour is yellow. The unremarkable small flowers grow in large plumes measuring up to 8 cm and have a strong scent especially in the evening. The large flattened nut fruits, measuring approx. 2 cm, grown in dense plumes and are yellowish-green. They resemble the fruit of the elm. 'Ptelea' is Ancient Greek for elm. The fruits dry on the tree and remain decorative until deep into the winter. It is an excellent forage tree, attracting many honeybees and bumblebees. Is very seldom cultivated.
