

Pyrus communis 'Beurré Hardy'

Výška	6-8 m
Šírka	3-7m
Koruna	oval, half-open crown
Kôra a vetvy	brown
Listy	green
Kvety	white, flowers in May
Plody	edible fruits, yellowbrown
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	clay soil, loamy soil, sandy soil, calcareous soil
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	5b (-26,0 do -23,4 °C)
Odolnosť voči vetru	good, also on the coast
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	malé záhrady, dvory
Tvar	Ovocný strom vysokokmeň, Ovocný strom polokmeň, Ovocný strom špalier

'Beurré Hardy' is a strong-growing pear tree with a fairly narrow pyramidal, semi-open crown of 4-8 m in height. The stem branches do not branch very strongly. The tree flowers in the second half of April with white blossoms. 'Beurré Hardy' is not self-pollinating, which means that a tree of another pear variety should be nearby for good fruiting. Preferably, 'Charneux', 'Doyenné du Comice' or 'Gieser Wildeman' are used for this. The pears of 'Beurré Hardy' are large and have a firm, green-brown to rust-coloured skin. The flesh is soft and juicy. Beurré comes from the French beurre, meaning butter, and refers to the softness of the flesh. The flavour is very pleasantly sweet and aromatic. The pears are ready for picking in the second half of September. It is a typical hand pear with a short shelf life, mainly suitable for direct consumption. It has alternating fruiting years, so annual rich fruiting is not guaranteed.

'Beurré Hardy' was selected by the French nurseryman M. Bonnet, Boulogne-sur-Mer, around 1820 and entered the market about 10 years later. Hardiness zone 5b.
