

Quercus ×hispanica 'Fulhamensis'

Výška	12-15 m
Šírka	10-12m
Koruna	round/spherical, half-open crown
Kôra a vetvy	grey
Listy	evergreen
Kvety	light yellow, flowers in April
Plody	brown
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	loamy soil, sandy soil, calcareous soil
Pôdna vlhkosť	Vhodné do vlhkých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	7 (-17,7 do -12,3 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné vetru, Odolné posypovej soli
Použitie	priemyselné oblasti
Tvar	Vysokokmeň, Vetvený, Viackmeň

A semi-evergreen to full evergreen tree growing to 12 - 15 m. The red crown has gracefully hanging twigs which are thinner than other cultivars of Q. x hispanica. The thick bark is dark grey, deeply grooved and corky. The leaves are dark green on top whereas the underside has grey-white hairs. The blossom and fruit are the same as on the species. During severe cold, the leaves turn brown in the winter, only falling when the new leaves emerge. A healthy, warmth-loving tree which prefers a limy soil. There are a few types in circulation with the same name.
