

Quercus cerris 'Marvellous'

Výška	12 m
Šírka	5-10m
Koruna	broad pyramidal, half-open crown
Kôra a vetvy	twigs grey-brown to grey-green, felt-like, bark almost black, roughly grooved
Listy	elongated to oval, pointed lobes, 6 - 12 cm
Kvety	golden-coloured ? catkins, 5 - 6 cm, May
Plody	long ovoid, 2.5 - 3 cm, in groups of 1 - 4, cupule with long, narrow reflexed scales
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	preferably limy
Pôdna vlhkosť	Vhodné do vlhkých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6a (-23,3 do -20,6 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru, Odolné posypovej soli
Použitie	pobrežné zóny, priemyselné oblasti
Tvar	Vysokokmeň, Vetvený

Medium-size tree with a strong growth and an upright central leader. 'Marvellous' forms a regular pyramidal tree that spreads later. The bark is like the species, almost black and roughly grooved. The young twigs are grey and felt-like and bear light green leaves. The summer leaves are glossy dark green with pointed lobes like the species. The tree keeps its leaf until the first frost. Its regular form makes it suitable for lanes, wide green borders and verges. A very wind resistant and healthy tree. Q. cerris can also be used in industrial areas.
