

Quercus palustris

Výška

20 - 25 (40) m, fast growing

Šírka

12-15m

Koruna

broad spherical, later rounded, half-open crown

Kôra a vetvy

grey, smooth to shallow grooves, twigs olive coloured

Listy

obovate to oval, roughly lobed, green, 7 - 15 cm

Jesenné sfarbenie

Červená

Kvety

gold-coloured ? catkins, May

Plody

flattened spherical acorns, approx. 1 cm

Tréne

Žiadny

Jedovatosť

Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá

Typ pôdy

all types, preferably nutritious

Pôdna vlhkosť

Vhodné do vlhkých pôd, Odolné voči krátkodobému zaplaveniu

Spevnené plochy

Netoleruje spevnené plochy

Zóna odolnosti

5a (-28,8 do -26,1 °C)

Odolnosť voči vetru

good

Ostatná odolnosť

Odolné mrazu (WH 1-6), Odolné vetru, Odolné posypovej soli

Stromy pre zvieratá a hmyz

Odolné mrazu (WH 1-6), Odolné vetru, Odolné posypovej soli, Plody ako potrava pre vtáctvo

Použitie

bulváre a široké ulice, priemyselné oblasti

Tvar

Vysokokmeň, Viackmeň

Pôvod

north-east of North America

A reasonably fast-growing tree with a straight main trunk and handsome horizontally growing branches. After some time the lower branches can droop somewhat, a characteristic of the species. Old trunks bear shallow grooves. The many short twigs spread over both trunk and heavy lateral branches are another characteristic. The leaves are somewhat variable in shape, ovoid to oval, 7 - 15 cm long and sometimes equally wide. The roughly lobed leaves have 2 to 4 pairs of sharply serrated lobes. The smooth leaves are bright green and turn to dark red in the autumn. The dead leaves sometimes remain hanging on the tree for a long time. The small acorns are only enclosed at the base by the cupule, up to a maximum of one third. The cupule is thickly covered with small contiguous scales.
