

Quercus pontica

Výška	4 - 6 m
Šírka	4-6m
Koruna	round, half-open crown, capricious growing
Kôra a vetvy	brownish-grey, grooved, twigs yellowish-green
Listy	obovate to oval, roughly lobed, green, 15 - 20 cm
Jesenné sfarbenie	Žltá
Kvety	gold coloured slim ? catkins, 15 - 20 cm long, May
Plody	elongated ovoid acorn, 2 - 3.5 cm
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	fertile, moist and loamy
Pôdna vlhkosť	Vhodné do vlhkých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6a (-23,3 do -20,6 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné posypovej soli
Použitie	stromy do nádob, priemyselné oblasti, malé záhrady, dvory
Tvar	Vysokokmeň, Viackmeň
Pôvod	Caucasus, Turkey

Occurs on moist hillsides in Turkey and the Caucasus and grows into a large shrub or multi-trunked tree. Often grown in the cultivated state as a small single-trunked tree. The bark on old trunks and lateral branches fissures irregularly and causes loose bark plates to detach. The large angular winter buds are a very remarkable feature. The large leathery leaves are obovate to oval, with regular serrations and are green with a bluish-green underside. They are 15 - 20 cm long and 6 - 10 cm wide. The flowers, pendulous catkins, are remarkable. The elongated ovoid acorns are approx. 2 - 3.5 cm long and one-third to one-quarter enclosed in the cupule, the latter being covered with contiguous felt-like scales. Quercus pontica is a decorative tree for parks and small gardens. Prefers a warm and sunny site.
