Striking tree with a round crown and a height of 6 to 10 (12) m. The yellowish brown to grey trunk has deep, corky grooves. Young twigs are yellowish green and very bendable. The lanceolate leaves have silvery, velvety white hairs on both sides. The hairs remain on the leaves the entire summer, giving the tree a striking silvery grey colour, particularly from a distance. The leaves fall off late in the autumn, sometimes as late as the beginning of December. The yellow catkins appear at the same time as the leaves. Roots grow close to the surface, with very many root hairs. It grows in moist places and can stand temporary submersion, but also thrives in dryer places. Morphologically, this plant bears a great resemblance to *S. alba*.
