

Sorbus americana

Výška	10 - 12 m
Šírka	6-8m
Koruna	ovoid to round, half-open crown
Kôra a vetvy	bark grey, twigs glossy reddish-brown
Listy	imparipinnate, approx. 25 cm, 13 - 17 leaf segments, green, feathered leaf
Jesenné sfarbenie	Žltá, Oranžová
Kvety	in umbels, Ø approx. 16 cm, white, May/June
Plody	orange-red, Ø 0.6 – 0.9 cm, very abundant
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	peaty soil, does not stand up to heavy clay or wet soils
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	3 (-40,0 do -24,5 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Plody ako potrava pre vtáctvo
Použitie	bulváre a široké ulice
Tvar	Vysokokmeň
Pôvod	the northeast of North America

In its natural habitat in the northeast of North America this species grows to become a small to medium-sized tree. It is a slow grower with a light-grey trunk and glossy reddish-brown twigs. This gives the tree a remarkable appearance in the winter. The imparipinnate leaves consist of 13 - 17 lanceolate leaflets that turn golden yellow in the autumn. The leaf edge is usually sharply serrated. The flowers are in umbels with a diameter of approx. 16 cm. The separate flowers are 0.5 – 0.7 cm in size and white. Orange-red berries follow in the autumn. *S. americana* closely resembles *S. aucuparia* but is distinguished by the reddish-brown twigs and the somewhat narrower dark green leaves.
