

Sorbus aria

Výška	12 - 15 m
Šírka	4-6m
Koruna	wide-spreading spherical to broad oval, half-open crown
Kôra a vetvy	grey, smooth, later slightly grooved, young twigs grey and felt-like
Listy	broad-oval to almost round, underside white and felt-like, 8 - 14 cm
Kvety	in bunches approx. 10 cm wide, white, May, after emergence of leaves
Plody	orange-red, Ø approx. 1.2 cm, round-oval
Tárne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	not very demanding, preferably calcareous and not wet
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	fairly to good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	bulváre a široké ulice, stromy do nádob, strešné záhrady
Tvar	Vysokokmeň
Pôvod	Central and Southern Europe, North Africa

Native to Central and Southern Europe, where this tree grows mainly on drier calcareous soils. It is a mountain ash remarkable for its relatively large oval leaves that are white and felt-like on the underside. The tree grows slowly and branches out lower down so that the smooth trunk remains short. Young twigs are remarkably grey and felt-like; later they turn brownish-green. The leaf buds and the emerging leaves are also grey and bear soft hairs. Later the upper side of the leaves turns dark green because the hairs fall off. The leaves remain on the tree until far into the autumn and they gradually turn yellow. The tree produces abundant flowers in bunches approx. 10 cm wide; these appear in May after the emergence of the leaves. The orange-red, edible but mealy berries follow in the autumn. The roots go deep and there is a definite taproot.
