

Sorbus aucuparia

Výška	10 - 15 m
Šírka	6-8m
Koruna	broad ovoid, half-open crown
Kôra a vetvy	light grey, smooth bark, later slightly flaky, twigs brown
Listy	imparipinnate, up to 20 cm long, 9 -17 (21) leaflets, matt dark green, feathered leaf
Jesenné sfarbenie	Žltá, Oranžová, Červená
Kvety	in umbels, Ø approx. 14 cm, white, May/June
Plody	orange-red to red, Ø approx. 1 cm
Trne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	makes few demands, can grow on poor soils
Pôdna vlhkosť	Vhodné do suchých pôd, Odolné voči krátkodobému zaplaveniu
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	bulváre a široké ulice, stromy do nádob, strešné záhrady
Tvar	Vysokokmeň, Vetvený, Viackmeň
Pôvod	Europe, Asia Minor, North Africa

This tree occurs naturally in practically the whole of Europe. It has a broad ovoid crown. In its early years the crown is fairly narrow but broadens out later. Because of its abundant fruit the branches bend, eventually making the crown almost rounded. The smooth trunk is light grey and flakes off somewhat at a later stage. The young twigs are light brown and carry many lenticels. The imparipinnate leaves consist of 9 - 17 (21) elongated leaflets with a roughly serrated edge. The autumn colour is yellow to orange-red. The orange-red to red fruits appear simultaneously with the autumnal colour. Because it makes few demands of the soils this tree occurs in a variety of places, especially in woodland and on wooded banks, where its fruit attracts many birds. Also grows on dry poor soils.
