

Sorbus aucuparia 'Xanthocarpa'

Výška	6-10 m
Šírka	4-6m
Koruna	round/spherical, half-open crown
Kôra a vetvy	grey
Listy	green, feathered leaf
Jesenné sfarbenie	Žltá, Oranžová, Červená
Kvety	white, flowers in May
Plody	yellow, orange
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	loamy soil, sandy soil, peaty soil, acid soil
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1-6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1-6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	bulváre a široké ulice, stromy do nádob, strešné záhrady, malé záhrady

Because it lacks a top branch, 'Xanthocarpa' has a broad loose crown that eventually becomes spherical. The tree attains a height of 6 - 10 m and has a smooth light grey trunk. Young twigs are brown and bear many lenticels. The leaves are identical to those of the species and turn yellow to orange-red in the autumn. The orange-yellow fruit is characteristic of this cultivar. The fruit emerges from late July and is not much eaten by birds. Grows best on sandy soil that is not too moist and in a sunny site. Here the tree remains at its healthiest. Winter hardiness zone:
