

Sorbus commixta

Výška	8 - 10 m
Šírka	6-8m
Koruna	broad oval, half-open crown
Kôra a vetvy	silver-grey to greyish-brown, smooth, later with shallow grooves
Listy	imparipinnate, 15 - 20 cm, leaflets ovoid to oval, dark green, feathered leaf
Jesenné sfarbenie	Žltá, Červená
Kvety	white, in umbels of 9 - 15 cm in diameter, May/June/July
Plody	glossy, orange-red to brownish-red, Ø 0.7 - 0.9 cm
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	light clay and sandy soils, withstands dry conditions
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	6a (-23,3 do -20,6 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1-6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1-6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	bulváre a široké ulice, úzke ulice, stromy do nádob, strešné záhrady
Tvar	Vysokokmeň, Viackmeň
Pôvod	Northeast Asia, Japan

This small East-Asian tree closely resembles *S. aucuparia* and attains a height of 8 - 10 m. The crown is ascending when the tree is still young but it later becomes broad and oval. The smooth bark is silver-grey to greyish-brown and bears brown lenticels. Young twigs are olive-green and also carry remarkable lenticels. *S. commixta* has imparipinnate leaves consisting of 5 to 6 (seldom 7) pairs of leaves. The separate leaflets are elongated and serrated and their colour is a glossy dark green, bluish-green on the underside. In the autumn it turns from yellow and red to deep coral-red. The flowers emerge late in the spring and are followed by glossy orange-red to brownish-red fruits with a diameter of approx. 0.8 cm. They stay on the tree until late October.
