

Sorbus latifolia 'Atrovirens'

Výška	8-10 m
Šírka	6-10m
Koruna	broad conical, half-open crown
Kôra a vetvy	grey
Listy	green, white
Kvety	cream-white, flowers in May
Plody	yellow, orange, red, brown
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	loamy soil, sandy soil, nutrient-poor soil
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	bulváre a široké ulice, priemyselné oblasti
Tvar	Vysokokmeň

A frequently used, robust and fast-growing cultivar of *S. latifolia* with a broad pyramidal and remarkably symmetrical crown. Height up to 10 m. The grey trunk is smooth and the young twigs are reddish-brown with white hairs. The broad ovoid to almost round and sturdy leathery leaves are glossy dark green. On the underside they are felt-like and yellowish-grey. The young emerging leaves also bear white felt-like hairs. They remain smaller than those of the species and remain hanging on the tree for a long time in the autumn. In late May the cream-coloured flowers appear and are followed in late summer by numerous brownish-red to orange-yellow fruits. Reasonably resistant to bacterial fire blight and very wind-resistant. Winter hardiness zone: 5a
